

Bats fly out and never return  
when you use the BATCONE®  
product that's right for you

**Batcone® 2**—The innovative design of the Batcone® 2 is ideal when a square shape is better suited to the entry port of a bat colony. It is designed with a built-in solid flange with mounting holes which allows easy and fast installation. It can also be used with the flexible vinyl flange, making it effective for virtually any surface application.

**For best results with Batcone® 2, bend flanges slowly back and forth to prevent breakage**

- At dawn or dusk, which is the best time to conduct a "bat watch", observe points of entry / exit for bats in structure
- Incoming / outgoing bat activity will assist in determining number of cones needed for installation (see DVD for more detailed information) For large bat colonies, use multiple cones for best results
- Install cones at entry points, always at a downward angle...it is CRITICAL to seal all other entry / exit points before installing cones strategically to prevent bats from moving to other sections of structure
- After bats leave structure to feed and you are certain they are all outside the structure, remove remaining cones and seal all holes

#### A WORD OF CAUTION

PLEASE NOTE THAT REMOVING BATS DURING THEIR BIRTHING CYCLES CAN RESULT IN THE OFFSPRING BECOMING TRAPPED INSIDE THE STRUCTURE. PLEASE CONTACT YOUR STATE WILDLIFE AGENCY OR STATE HEALTH DEPARTMENT FOR INFORMATION REGARDING BAT BIRTHING CYCLES IN YOUR REGION

Get a Great Return on  
Your Investment when you  
use Batcone® and Pro-Cone®  
Professional Wildlife Excluders

When you add Batcone® and Pro-Cone® to your pest control capabilities, you can offer exceptional and safe exclusion services for multiple species: bats, sparrows, starlings, red squirrels, flying squirrels, rats and mice. Creatures exit the building through the Batcone® or Pro-cone® and cannot get back in. Batcone® LLC is committed to the ongoing development and improvement of our unique line of professional wildlife control devices that are effective and easy to use. Our products are reasonably priced, re-usable and weatherproof.

## Get to know Jim Dreisacker, Inventor of BATCONE® and PRO-CONE® Excluders

Jim Dreisacker is President and owner of Westchester Wildlife LLC, which he founded in 1982. He is an experienced wildlife control professional, licensed in New York and Connecticut. Over the years, Jim has been involved in a vast and far-reaching variety of wildlife management situations, from bats and coyotes to alligators and snakes, and everything in between.

The creation of the Batcone® and Pro-cone® wildlife excluders are the direct findings of Jim's wildlife control experience in the rural and suburban areas of New York and Connecticut. His broad work in the field increased his exposure to bat infestation in commercial buildings as well as residential structures. This experience led to the development of several exclusion prototypes that would assist him in the increasing demand for bat removal services. In 2004, Jim invented the Original Batcone®. Since then, a variety of exclusion systems have been developed to help manage many wildlife exclusion jobs simultaneously, thereby increasing profits.

In the Spring of 2008, Batcone® LLC introduced the new generation of Pro-cone® Multi-Use Professional Wildlife Excluders. The new series of Pro-cone® excluders are designed to exclude multiple species from residential and commercial structures: bats, sparrows, starlings, red squirrels, flying squirrels, rats and mice.

Jim has been featured in the *New York Times*, PCT, and assorted print publications as well as on CNN and other network news programs. He has made guest appearances on the TV shows "Inside Edition" and "Extra", where he shared his expertise on bat removal. He is presently working on a New York State suburban coyote study with Cornell University.

## The new Pro-cone® Series of Multi-use Professional Wildlife Exclusion Systems

It takes just a few minutes to install any exclusion system you select when it has been designed by Batcone® LLC. All you need is a supply of flanges, duct tape, silicone caulk, staples or screws. To seal entry / exit points use your choice of wire mesh, copper "stuff it", poly-foam or silicone sealant caulk.

### Pro-cone® Corner

Pro-Cone® Corner—Designed for multiple use and multiple wildlife species: Bats, red squirrels, flying squirrels, sparrows, starlings, rats and mice. Made from heavy duty plastic, built-in solid flange with mounting holes. Cone has pre-fixed angle, designed for installation at any angle. Does not work with flanges.

### Pro-cone® Round

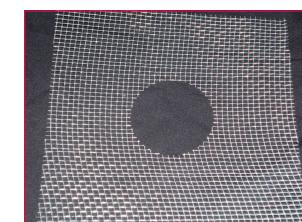

Pro-Cone® Round—Designed for multiple use and multiple wildlife species: Bats, red squirrels, flying squirrels, sparrows, starlings, rats and mice. Made from heavy duty plastic, built-in solid flange with mounting holes. Optional use with vinyl or wire flange. Works great on Spanish Tile roofs because of its shape.

### Pro-cone® Square

Pro-Cone® Square—Designed for multiple use and multiple wildlife species: Bats, red squirrels, flying squirrels, sparrows, starlings, rats and mice. Made from heavy duty plastic, built-in solid flange with mounting holes. Offset square flange for installation in difficult areas. Optional use with vinyl or wire flange. Can be installed in corners of soffits. Square base allows you to "wedge" cone into place.

The flexible vinyl and wire mesh flange allow for installation on virtually any surface. The wire mesh flange is effective in the exclusion of red and flying squirrels, rats and mice.
